Multi-Site Implementation Program

MPulse Means Faster Implementations™

Reduce Risk, Implement MPulse Faster on Multiple Sites

The MPulse Multi-site Implementation Program (MSIP) is a CMMS implementation program designed to take you from software purchase through successful implementation across two or more site locations, without missing any critical steps along the way. **If you want to standardize your workflow processes and reporting across locations, this MPulse implementation program will get you there.**

A Goal-Oriented Approach

Putting a CMMS/EAM solution in place across multiple locations can seem daunting. MPulse MSIP gets you through planning, data migration, training, and "go-live" day on each site so your processes, reporting needs, data types, and data imports are the same at each location. Then we provide tailored recommendations and follow-up so you can measure your progress against goals.

Designed to accelerate your software implementation and reduce your ramp-up time, MPulse MSIP minimizes disruptions and helps you achieve a faster return on investment.

The Multisite Connector is recommended for the Multi-site Implementation Program, but not required.

Comprehensive Service, Minimal Disruption

Our intensive program covers all the phases of a successful implementation across multiple site locations.

With the MPulse MSIP, you can rest assured you're following a comprehensive process to drive results.

Implementation at Flagship Location

You'll choose the flagship location to serve as the primary site model for implementation. Then you'll be assigned an MPulse Account Manager and a Senior MPulse Engineer, who'll guide you the whole way through.

Flagship Location Planning Meeting (Day 1)

- Define successful implementation
- Define user groups and workflows
- Determine what data needs to be imported
- Review and/or import data collection spreadsheet
- Design reports and a database layout
- Develop a training plan and curriculum

Flagship Location Comprehensive Software Training (Days 2–4)

- Tailored to implementation goals
- Primary users (managers/admins)
- "Drop-in" users (maintenance technicians)

Flagship Location "Go-Live" Day (Day 5)

- Site implementation launch

Implementation at Additional Site Locations

After successful completion at the flagship location, implementation services will occur on the additional sites so all processes, reporting needs, data types, and data imports are standardized across the locations. For each additional location, MPulse will follow the planning meeting report with data collection consistent with the flagship implementation plan.

Additional Site Locations Comprehensive Software Training (Days 1–3)

- Data import
- Training and consulting services tailored to implementation goals
  - Primary users (managers/admins)
  - "Drop-in" users (maintenance technicians)

Additional Site Locations "Go-Live" Day (Day 4)

- Site implementation launch
