

MPulse Means Easy Mobile Access™

Access your MPulse CMMS anywhere— online or offline!

MPulse Mobile gives your team everything they need to get the job done in the field or on the plant floor, even if they can't connect to the Internet.

No need to rush back to the office. Everything they need is right on the screen. Updates are automatically synced with your MPulse CMMS once they're back online.

What can I do with MPulse Mobile?

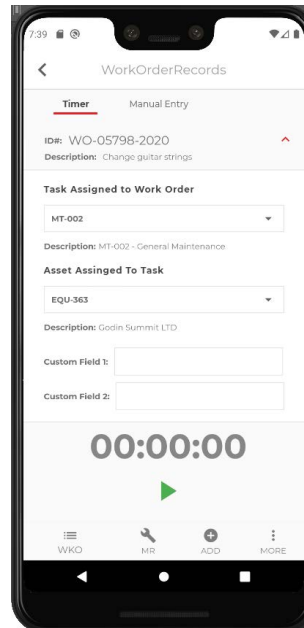

MPulse Mobile is an add-on feature available for any MPulse edition. Technicians simply enter their usual account information to log in and...

- Report problems in the field
- Capture data when and where it happens
- Document work with pictures and videos
- Receive and update work assigned to you
- Complete and close work orders
- Track hours worked with activity timer
- Find and link inventory using barcodes
- Work offline with seamless background synchronization

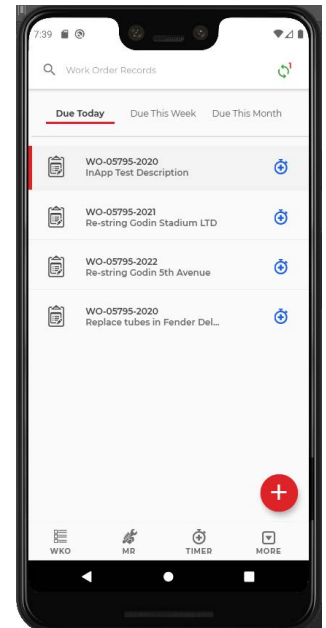

What about Security?

Lose a device? No problem. MPulse Mobile has many of the same security features as our full desktop version, so you can confidently control access even when you can't physically control the location of your devices.

MPulse supports three types of user security: Active Directory integration, SAML SSO or MPulse-based authentication.
